

JEFFERSON COUNTY FLORIDA 2022 ATLAS

PUBLISHED BY:
JEFFERSON COUNTY PROPERTY APPRAISER'S OFFICE
480 W. WALNUT ST. MONTICELLO, FL 32344

NOTICE

Let it be known that this publication has been prepared as a reference guide to property ownership. The data contained herein has been compiled from official city, state and county public records. Due to the constant sale and transfer of property it is impossible to guarantee 100% accuracy. We believe that this information is correct and current, however it is not intended for any legal use, whether it be in sales, transfers, trades, leases of any type etc., and do not accept responsibility for errors of any nature or omissions contained herein.

**LAND PARCEL ATLAS
JEFFERSON COUNTY, FLORIDA**

INTRODUCTION

This Land Parcel Atlas is being provided by the Jefferson County Property Appraiser's Office as a public service to provide information regarding the ownership and location of land parcels in Jefferson County.

**Angela Gray
Jefferson County Property Appraiser**

TECHNICAL INFORMATION¹

by George M. Cole, PE, PLS

This atlas provides a graphic portrayal of all land parcels recorded with Jefferson County. The parcel maps provided herein are based on the Jefferson County Property Appraiser's Geographic Information System. In that system, the boundaries for each parcel has been plotted based on the recorded deeds for the parcels. The roadways, as depicted, are based on field measurements. Therefore, there may be slight differences between property boundaries along roadways, as depicted, and the roadways.

More complete information on each parcel illustrated is available on the Property Appraiser's internet web site (jeffersonpa.net). On that web site, information on land parcels may be accessed by owner name, parcel number, or street address. In addition to parcel maps, information available on that web site includes appraised values, aerial photography, recent land sales, roads names and a reference to the book and page in the Jefferson County public records where the deed to the parcel is recorded. With that reference, a copy of the deed may be obtained from the County Clerk of Court.

The deed to each parcel includes a precise description of the parcels themselves. Most of such descriptions are based on one of three systems, either by reference to the Public Land Survey System of the United States, by reference to other recorded subdivisions, or by a metes and bounds description referenced to an well established point. To assist in the interpretation of such descriptions, information regarding those systems is provided below.

Public Land Survey System Descriptions - Descriptions based on the Public Land Survey System have traditionally been some of the most commonly used in the United States. Almost all of the privately owned lands, other than land in the original 13 colonies, was originally surveyed and conveyed by reference to that system. Under the 1785 land act, public lands were subdivided into a series of townships that were six miles by six miles in size. In Florida, the public land survey had its origin point at a point located in Tallahassee. A baseline was run east and west from that point and a meridian run north and south. In each quadrant, townships are identified by how many townships they are north or south of the origin point and by how many ranges they are east or west of that point (Figure 1). Each township was further subdivided into 36 sections one mile on each side, each containing 640 acres, numbered in a standard fashion (Figure 2).

¹ Much of the information regarding land descriptions in this section is excerpted from the *Survey Reference Manual, 4th Edition* (2006) by George M. Cole, published by Professional Publications, Inc. of Belmont, California.

Figure 1
Tallahassee
Meridian
And Baseline

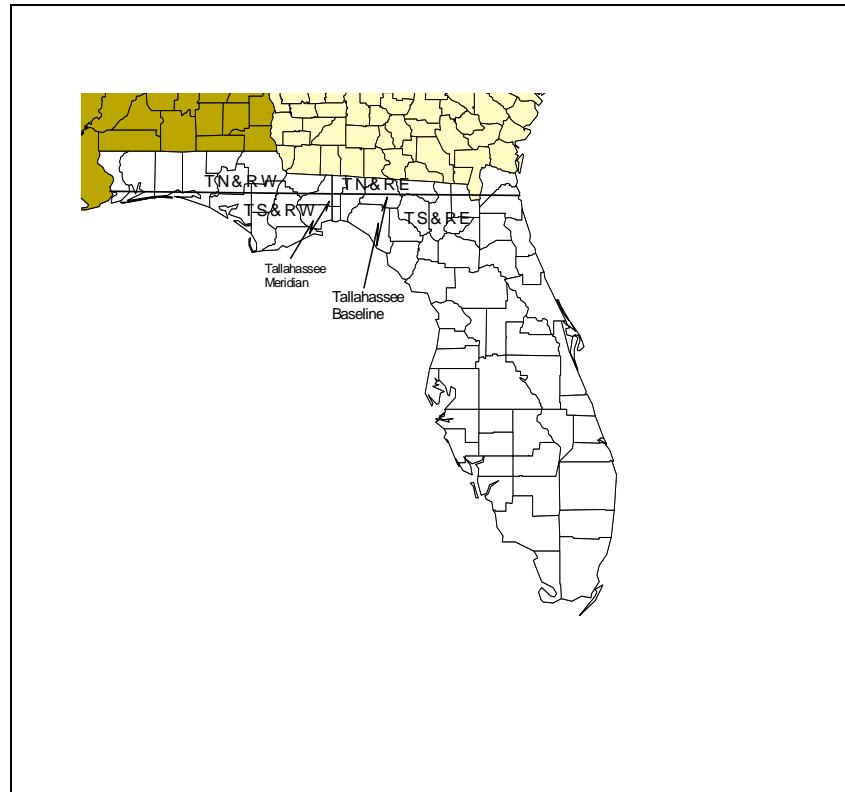

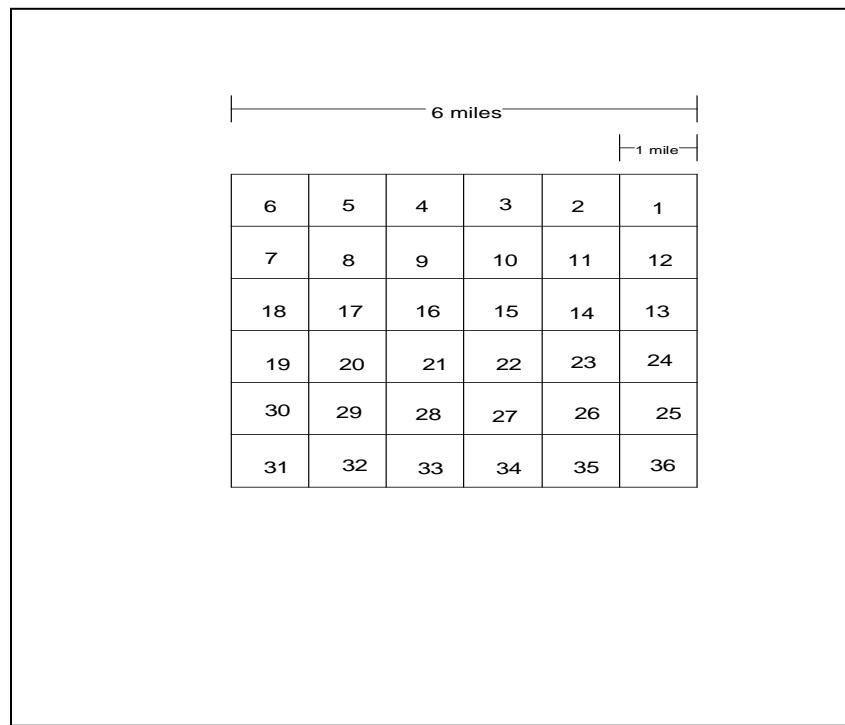

Figure 2
Subdivision of
Township into
Sections

The original land act specified that public land was to be sold by the section. Therefore conveyance of any of the public lands that had been surveyed under the Public Land Survey System involved a relatively simple description providing the pertinent section, township and range.

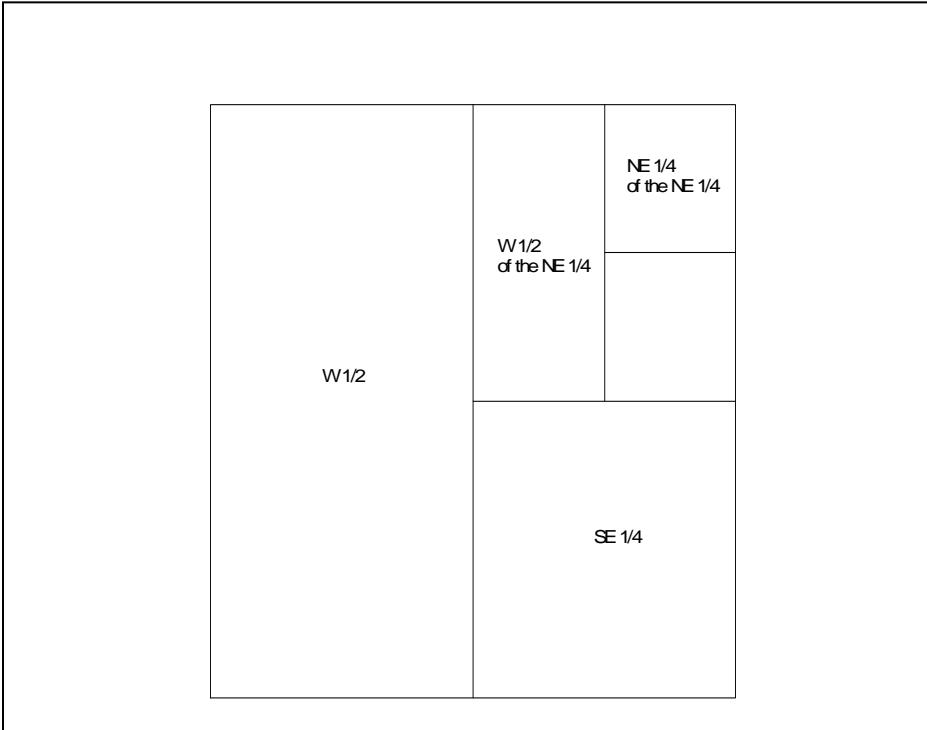

Example: Section 6, Township 1 North, Range 2 East, Tallahassee Baseline as depicted on the official General Land Office plat approved June 1, 1842.

Due to concern that the minimum size of 640 acres for land purchases restricted land ownership to the wealthy, successive legislation reduced the minimum size for purchase of public land to the half section, with a standard size of 320 acres, to the quarter section, with a standard size of 160 acres, to the half quarter section with a standard size of 80 acres, and finally to a quarter of a quarter section with a standard size of 40 acres. That size tract became the “modular unit of settlement”, and “40 acres and a mule” became the standard requirements considered necessary for subsistence for the average family.

The public land surveys only traversed the perimeter of sections. Thus, all of the boundaries of aliquot parts of sections as described above were not surveyed in the public land surveys. Nevertheless, the description of such tracts is still a straight-forward process using a standard convention (Figure 3). Note that when attempting to visualize the location of aliquot parts of sections, it is best to start at the end of the description and work backwards.

Example: The northeast one quarter of the northeast one quarter of Section 6, Township 1 North, Range 2 East, Tallahassee Meridian as depicted on the official General land Office plat approved June 1, 1842.

*Figure 3
Aliquot Parts
of a Section*

In the platting process for the public lands surveys, it was the practice to divide fractional sections along navigable water bodies into relatively small lots. Typically, the boundaries of such lots were drawn along lines of fractional parts of the section. This was a cartographic process, and the boundaries of such government lots were not surveyed except for any boundaries coincident with section lines and those coincident with meander lines along the water body. As with descriptions for Public Land Survey System sections and aliquot parts of sections, government lots may be described simply by reference to the lot number, section, township, range, base meridian and pertinent official plat.

Example: Government Lot 3, Section 12, Township 1 North, Range 2 East, Tallahassee Meridian, as depicted on the official General Land Office plat approved June 1, 1842.

In the counties in Florida along the boundary with Georgia, a unique situation exists in the Public Land Survey System. Due to disputes as to the correct boundary between the states, the common boundary was surveyed three times as part of the Public Land Surveys, with the boundary controversy being finally settled in 1859 with the so-called Orr and Whitner line. As a result, there are a series of irregularly sized lots, called the Georgia-Florida lots, now lying in Florida along the northern frontier of Jefferson County.

Descriptions Referencing Other Subdivisions – A second type of description, that referencing other subdivisions of land, is very similar to those involving sections and aliquot parts of sections of the Public Land Survey System. Both of these types of descriptions involve a reference to a subdivision of land where the plat of survey has been filed in the public records. Such recorded subdivision plats are typically filed in each county courthouse and are available at the Clerk of Court's office in Jefferson County. Since such subdivision plats are available in the public records, a description of land portrayed on such a plat requires only that the lot or lots be identified along with the subdivision name and a reference to where the plat is recorded.

Example: Lots 100 and 101 of Dreblow & Company's the Silver Lake Subdivision as recorded at Plat Book A, Page 3 of the public records of Jefferson County, Florida

Metes and Bounds Descriptions – In the twenty states not subdivided under the Public Land Survey System, most of the surveys for the original private conveyances were made by the metes and bounds method. Metes and bounds descriptions are also used extensively to describe irregular areas being severed from lands originally subdivided under the Public Land Survey System. A metes description identifies a beginning point and then describes each course in sequence around the perimeter of the tract until the point of beginning is reached again to complete the description of the perimeter. Such a description includes a distance and direction for each course.

Example: A tract of land in Section 12, Township 3 North, Range 6 East in Jefferson County, Florida, more particularly described as follows: For a point of beginning, commence at an old axle marking the southeast corner of said Section 12; then go N00°01'E for 200 feet; then go N89°59'W for 400 feet; then go S00°01'W for 200 feet; then go S89°59'E for 400 feet to the point of beginning.

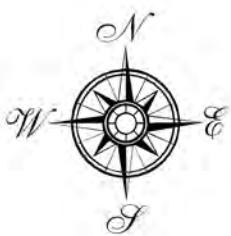

As may be seen from the provided examples, metes and bounds descriptions are somewhat more complex than descriptions merely referencing a recorded plat such as one from the Public Land Survey System or a lot in a private recorded subdivision. Since the survey creating a metes or bounds description is not typically part of the official records, a metes or bounds description must, in effect, describe the results of the survey creating the parcel and not just referencing a plat of survey available in the public records.
